FAQ & Errata

Firstly, thank you for investing in and playing Dropzone Commander 3rd Edition. The rulebook went to print earlier, and we have since spotted some issues that need addressing. Mostly, these cover obscure interactions and clarifications. The digital rules already incorporate these changes. We've also compiled a list of FAQs from the Community at the end of this document. Thank you for your understanding. Enjoy the game!

Every change or question that is new to that edition of the rules will be marked in blue.

Previous changes will be marked in green

FAQ & Errata

Errata

4.1.5 Determine Initiative

Amend first sentence to:

"Each player rolls a D6 and adds the level of their highest level Commander on the Table."

5.2.1 Playing Command Cards

Add the following paragraph to the end of this section:

"If a Command Card requires a Unit have a special rule or not have a special rule (e.g. if it Effects Units with Assault, or it Targets Units without UC), that Unit must have that special rule natively on its stats sheet."

7.1 Disembarking

Amend second paragraph to:

"Units may not Disembark from a Transport Aircraft if it is within 3" of an enemy Vehicle."

7.2 Embarking

Amend second paragraph to:

"Units may not Embark into a Transport Aircraft if it is within 3" of an enemy Vehicle."

8.3.1 Entering a Zone

Add the following paragraph to the end of this section:

"Infantry may not re-enter a Zone in the same Round as exiting it."

8.3.2 Exiting a Zone

Change first paragraph to:

"Infantry may not voluntarily exit a Zone in the same Round as entering it."

8.6.1 Radius Effects vs Occupiers

Add the following paragraph to the end of this section:

"You may only measure a radius or distance from an Occupier to anything outside the Zone if it is Sited. Measure as if you were attacking. From a Building, you may measure from a different point to each Unit measured to. Units Occupying the same Zone are always within the radius or distance."

8.8.1 Weapon Features Table

Flak Turret should have Att 6.

Battle Royale Scenario, page 38

Amend Attrition to 2 VP.

Castles Scenario, page 39

Add "Score on game end" to Dominate.

10.1.3 AWACS

Amend rule to

"Enemy Aircraft within X" of one or more Units with this rule may be attacked with a +1Ac bonus."

FAQ & Errata

10.1.16 Infiltrate

Amend first sentence of second paragraph to:

"Non-Auxiliary Transports of Squads with Infiltrate that choose to Infiltrate must begin Ready—they are allowed to start empty."

10.1.17 Jump X"

Amend first paragraph to:

"If it does not Embark or Disembark from a Unit that activation, this Unit may Jump when it starts moving—during its move, but not at its end, it is an Aircraft with an X" Mv. If Embarking/Disembarking from a Zone, this Mv is not halved."

10.1.18 Large

Add the following paragraph to the end of this rule:

"If the size of a Large Vehicle makes it impossible for a Weapon to get into range against it, physical contact is sufficient."

10.1.32 Strong

Amend rule to:

"Per Squad with two or more Strong Units in a CQB, one enemy Squad of your choosing suffers -1DF for that CQB, assigned at the start of step 1 of that CQB.

If both players have Strong Units involved, the player without the Initiative chooses an enemy Squad(s) to affect first."

10.1.33 Surveyor

Change "if one or more Vehicles" to "If one or more friendly Units".

In second paragraph change "Vehicles" to "Friendly Units."

11.1.4 Assault

Amend rule to:

"This Weapon may attack on the same round as Disembarking from a Transport, and/or entering or exiting a Zone. If it does any of these it suffers -2 Ac, or -1 Ac if it has a R of CC. It still may not attack in the same Round as Embarking into a Transport.

If a Unit with an Assault Weapon Disembarks then moves 0", it counts as having moved 1" for attacking purposes."

11.1.14 Field

Amend second sentence of first paragraph to:

"Instead, each Zone, Vehicle, and Infantry Unit within its R are assigned attacks equal to its Att."

Amend the fourth paragraph to:

"If this Weapon has AA, its attacks are assigned to Aircraft instead of Zones, Vehicles, and Infantry."

11.1.15 Flame

Amend the first sentence to:

"This Weapon ignores the Ac penalty against Obscured targets, and it ignores Evasion."

11.1.33 Strafe

Amend first sentence to:

"When attacking during its Unit's activation, this Weapon may freely split its attacks between Units within 3" of at least one other Unit it targets."

FAQ & Errata

Frequently Asked Questions Transports

When one Squad shares multiple identical Transports, those Transports form a Squad. Do they need to maintain coherency?

Yes, those Transports must maintain coherency with each other but not with the Squad they are carrying.

Can multiple Squads share multiple Transports, provided all Squads and Transports share a single larger Transport? E.g., can three Squads of two Legionnaire Units each share two Bear APCs, which in turn share a Condor Dropship?

No. Multiple Squads can only share one larger non-Auxiliary "top-level" Transport. Each Squad in the Group must be either directly embarked in the larger Transport, or embarked in and filling a Squad of Transports that are in turn embarked in the larger transport.

Can a Squad embark into any Transport in the Group, or only the Transport(s) it was assigned to during Group formation? E.g, I have two Squads of Legionnaires (A and B) embarked in two Bears (C and D respectively). If Bear C is destroyed, can Legionnaires A embark into Bear D?

Squads are assigned to specific Transports when building an army, but during a game, they may embark into any eligible Transports in the same Group. In the example, Legionnaires A can embark into Bear D, despite having started the game in Bear C. Similarly, if a third Bear (E) were reassigned to the Group due to Bear C being destroyed, Legionnaires A or B could embark into Bear E.

Can multiple transports together carry a single larger unit? E.g. can three Neptune Dropships carry a single Hades?

No. A Unit must entirely fit inside a Transport in order to embark into it.

For determining if a Transport can be reassigned to a Group, do Auxiliary Transports in that group count when determining if the Group has sufficient Transports?

Yes.

How does Infiltrate work with a Squad Deploying via Infiltrate when they have a Transport without Infiltrate? E.g. a Squad of Longreach Snipers Infiltrating, plus their Juno.

The Squad Deploys via Infiltrate. Their Transport begins empty and Ready, even if it would ordinarily have to start Reserved due to not being an Aircraft or not having Strike.

What if the Transport is embarked in another Transport? E.g. two Squads of Longreach Snipers Infiltrating, plus their two Junos and a Neptune.

The Squad Deploys via Infiltrate. Their Transport begins empty and Ready, Embarked in its Transport that also begins Ready. There are no non-Transport Squads in this Group without Infiltrate, so this is allowed.

DROPZONE

COMMANDER

FAQ & Errata

What if the Transport (either the Transport belonging to the Infiltrators or the "top level" Transport it is Embarked in) is an Auxiliary Transport? E.g. a Squad of Longreach Snipers plus their pair of Angelos Jetskimmers.

Only non-Auxiliary Transports of Infiltrating Squads may begin empty and Ready. Auxiliary Transports need to either Infiltrate as well via their own Infiltrate rule, or they prevent all Squads in their Group from entering via Infiltrate.

What if any non-Transport Units in the Group do not have Infiltrate? E.g a Squad of Longreach Snipers Infiltrating, plus their Juno, a Squad of Immortals in their own Juno, both in a Neptune.

In order for any Squads in a Group to Infiltrate, all Squads must either have Infiltrate and deploy via it, or be non-Auxiliary Transports. As one or more non-Transport Squads in the Group do not have Infiltrate (the Immortals), no Squads in the Group may Infiltrate.

How do Auxiliary Transports work when sharing one larger Transport? Are they treated as Squads or as Transports?

Auxiliary Transports are treated as Squads when forming Groups, so count toward the maximum of 4 Squads sharing one large Transport in a Group. E.g. Two Squads of two UCM Troop Buggies, one carrying two Legionnaires and the other carrying two Hazard Suits, all embarked in a Vulture Dropship would be four Squads sharing one large transport, so would be allowed.

Can multiple Squads form a Group Embarked in a single Squad of Auxiliary Transports, which is then Embarked in multiple identical Transports (a "Group 3" style Group from page 10 of the Rulebook)?

Multiple Squads can be taken with and share a single Auxiliary Transport Squad, even if that Auxiliary Transport Squad has multiple Units, unlike normal Transports. However, that Auxiliary Transport Squad may only then either have no Transport/s itself or be taken in a single Transport (either on its own or sharing with other Squad/s).

For example, two Legionnaires and two Hazard Suits may embark in and share a Squad of four Troop Buggy Auxiliary Transports. Those Buggies may then either be taken with no Transports or taken in a single Vulture Dropship. They may not be taken in and split across a pair of Raven Light Dropships, as this breaks the "ONE larger transport" rule (since those auxiliary Transport Troop Buggies count as a regular Squad).

Movement

In 2.2 Placing Units, what is meant by Units "overlapping?" Can units share a footprint if they physically fit? E.g. Can a Shaltari Grav-Tank be placed between the legs of a Warstrider?

Yes. Overlapping refers to units physically overlapping. For example, a walker's leg placed on top of a tank. If models can be positioned so that they physically fit, such as the example of a tank sitting between the legs of a taller model, this is allowed. Note that models must be placed stably, realistically, and with all points of contact (e.g legs, tank treads) in contact with the Table.

DROPZONE

COMMANDER

FAQ & Errata

For Vehicle models supplied with bases, or where a player has added a base, the base is ignored in the same way as with Aircraft. Other Units may be placed on these bases. Other Units may not overlap with Infantry Units' bases though, since the base is part of an Infantry Unit.

Can a Unit enter the table via the Jump rule?

Yes. The Unit is able to Jump when it starts moving, and Units Entering the Table start their movement as they Enter it.

How does Movement work for Squads of multiple Units?

One Unit at a time, move every Unit within the Squad up to its maximum Mv, or if it has attacked this Round, the lowest MA of any Weapon it attacked with. When the Squad has finished moving, all Units in the Squad must be in Coherency. At that point the Squad completes its Move.

In 6.1 Moving, the rules say that Units may turn freely but pivoting on the spot counts as moving 1". Does this mean that every pivot during a movement uses 1" of Mv?

No. This is regarding the MA (Move and Attack Limit) of Weapons. Pivoting on the spot but not actually moving is treated as making a 1" move for the purpose of Weapons with limited MA, such as MA 0".

If a Squad cannot end their movement in Coherency, must they instead end as close as possible to being in Coherency?

No. The Units are not compelled to move closer to each other unless they are able to move back into Coherency, in which case they must do so. Note however that a Squad out of coherency cannot attack, Embark, or Disembark.

How does Disembarking during a Transport's movement work?

During movement, place the Transport where it would be if it ended its movement there. Then Disembark any disembarking Units. Then complete the Transport's movement. Note that this means Transports cannot Disembark Units from a place where the Transport cannot be placed legitimately.

Attacking

Can a Group benefit from a Status Token placed during its own attack? E.g., can a Squad attacking with a Jammer Weapon place and benefit from the increased range of the Jammer Weapon for other Units attacking in the Group at the same time?

No. Attacks from a Group are simultaneous, and any Status Tokens placed by that attack do not take effect until after the attack is completed.

Can you attack with a Weapon with Assault / attack when Disembarking from a Transport with Strike in the same activation in which you Embark into a Transport Unit?

No. A Unit cannot attack in the Round in which it Embarks into a Transport Unit, regardless of whether it has Assault or if the Transport it is Disembarking from has Strike.

DROPZONE

COMMANDER

FAQ & Errata

Can a Squad with MA 0" Weapons that have Assault, or are Disembarking from a Transport with Strike, attack with those Weapons after Disembarking?

No. Strike grants Disembarking Units Assault on their Weapons, and Assault states that if a Unit with an Assault Weapon Disembarks and moves 0", it counts as having moved 1" for attacking purposes.

Can a weapon with CC range be used to attack Sited Infantry if the attacking Unit is in physical contact with the face of the building or the point on the Area where the infantry are Sited? And can the Weapon attack the Zone?

CC weapons can be used to attack the Zone, but not the Infantry Sited in the Zone directly - They would be scattered across multiple floors.

How does Strafe interact with targeting Zones and/or Squads in Zones?

When targeting Squads in an Area, you may split your attacks if the next Squad is Sited at a point within 3" of where the previously targeted Squad was Sited.

When targeting Squads in a Building, you may split your attacks if the next Squad may be targeted using a point within 3" of the point where you targeted the previous Squad. For example, if you target a Squad on a face using its central door, you may target another Squad on that face using that same door, or another door/window within 3" of it. You may also target a Squad on a different face providing it has a window/door within 3" of the window/door you used to target the previous Squad.

Seeker and Flame Weapons may target Infantry 'as if they were Sited anywhere on a Zone', so they may split their attacks freely between any Occupiers in that Zone if that Weapon also has Strafe.

Strafe does not allow splitting attacks against Zones themselves, so a Strafe Weapon must put all its attacks into one Zone, or none.

How does Strafe work with Small Arms Weapons? Can I allocate Small Arms shots to multiple Units via Strafe, then choose to combine them or not combine them individually?

Yes. Combining fire via Small Arms is decided after allocating Weapons to targets or, in the case of Strafe, after allocating individual attacks. You are therefore able to allocate your Small Arms attacks from a Strafe Weapon to multiple Units, then choose to combine or not per target attacked by that Weapon. Note that all targets must still be in arc, range, and Line of Sight.

And can Small Arms Weapons with Pen X+ or Destroyer X+ inflict damage on non Infantry without combining?

No. The rule states, 'They can only damage Infantry', so Pen X+ and Destroyer X+ would inflict no damage. Once combined, though, they can damage non-Infantry, so Pen X+ and Destroyer X+ could then take effect.

DROPZONE

COMMANDER

FAQ & Errata

Can Small Arms Weapons place Status tokens with regular attacks or only when they combine?

Small Arms weapons that place Status tokens can place them using non-combined attacks since placing a Status token is not inflicting damage.

If Drive-By is used, what is the position of the other Units in the Squad for Line of Sight when the attack is made?

Drive-By is used after the Squad completes its movement, so all Units in the Squad are in the position they finished the movement in. Drive-By then allows the attacking Units to draw line of sight and range from a point along their own movement for their attacks, checked individually per attacking Unit. Therefore, Drive-By Units do not normally interfere with each other's Line of Sight unless it is drawn through where they ended their move.

Is an AA-S or AA-R Weapon an AA weapon (for the purposes of Field or any other mechanics that refer to AA Weapons)?

Yes. An AA-S or AA-R Weapon is still an AA weapon and is treated as having the Anti Air special rule, with the additions and exceptions granted by AA-S and AA-R.

How do Articulated and Large interact?

Large states that you use the Weapon's pivot point or the base of the barrel to determine the range and Line of Sight from a Weapon. Articulated then lets you determine Line of Sight from 1" above that point (unlike on non-Large Units, where it allows you to determine Line of Sight from 1" above the centre of the model).

Do Weapons with Devastator inflict additional damage to Infantry?

No. Devastator weapons inflict additional DP when rolling to inflict damage against Units, and you do not roll to inflict damage against Infantry.

Reaction Attacks

How do multiple Reaction Attacks work?

Multiple Weapons may Reaction Attack the same Aircraft—declare and resolve each individually, so if you're unsuccessful, you can attack with the next qualifying Weapon. The next Weapon must target the same point or a point further along that Aircraft's movement.

The aircraft is treated as being at that point when the Reaction Attack is made for Line of Sight range, where it crashes if applicable, AWACS, and so on.

How do Reaction Attacks and Jump interact? Can an AA and an Overwatch weapon both Reaction Attack a jumping Unit?

An AA Weapon may Reaction Attack the Jump Unit at any point in its movement as if it were an Aircraft, provided it is in range, arc and Line of Sight of the Weapon at that point.

An Overwatch weapon may Reaction Attack the Jump Unit, treating it as a Vehicle making a 0" move at its final position.

DROPZONE

COMMANDER

FAQ & Errata

How do Reaction Attacks and Fast Movers Flying High interact? Can an AA weapon Reaction Attack a Fast Mover as it begins to Fly High, and/or when it stops Flying High?

If the Fast Mover began its move Flying High, an AA Weapon could only Reaction Attack it right at the end of its move IF it elects to return to normal height (the rest of its move would have been flying high). If the Fast Mover elected to fly high at the end of its move, it could be Reaction Attacked at any point it moved along (it would have been at normal height throughout that move).

How does strafe and Reaction Attack work? Can I walk my shots onto a Unit I'm not Reaction Attacking? Or do I fire the entire gun at the same unit?

Strafe has no effect when the Weapon attacks its Unit's activation, so all the Weapon's attacks would target the Unit being Reaction Attacked.

CQBs

Can a single Squad suffer cumulative -1DF penalties from multiple Strong Squads in a CQB?

Yes.

In what order are Strong, Guard and First Strike resolved if both players have access to these abilities in a CQB?

First Strike takes place at the start of a CQB, before Step 1, so before Strong or Guard are applied. Strong and/or Guard are applied by the player without the Initiative first, at the start of step 1 of the CQB. Their opponent then applies Strong and/or Guard.

Do Concussed Infantry Squads with First Strike X reduce X by half?

Concussed Infantry Squads cannot use First Strike at all, as only non-Sited Squads may inflict hits via First Strike, and Concussed treats the Infantry Squad as being Sited for CQBs.

8.7 Close Quarter Battle says that Infantry may voluntarily fail their Bravery test without rolling, even if they have more than half their Units remaining. They can only attempt the Bravery test if they are below half strength, however. Can they still attempt and then voluntarily fail the Bravery test?

Yes. This rule allows them to attempt and fail the Bravery test without rolling, even if they would otherwise not be able to attempt the test.

If an Infantry Squad starts and ends their Activation in a contested Zone, and they have a Status Token(s) received prior to their Activation, what happens first - the removal of their Status Token(s) or the CQB?

The CQB takes place first, then after it is fully resolved any Status Tokens that would be removed are removed. This means that Concussed or Jammed Squads remain Concussed or Jammed throughout the CQB.

DROPZONE

COMMANDER

FAQ & Errata

Miscellaneous

What comes first, "end of the End Phase" or "end of the Round?"

The end of the End Phase happens first and is then followed by the End of the Round. This means that Command Cards played at the end of the End Phase are played before players spend remaining CP on Plan (which happens at the end of the Round).

Is the 2+ to find an object via Mapping Tokens modifiable, e.g. would enemy Occupiers with Terror worsen that to a 3+?

Yes, the 2+ replaces the base 6+ / 5+ required, and is modifiable.

If a Living Weapons Squad forms one Squad with another Living Weapons Squad in the Initiation Phase, and one of them has a Status token, what happens?

The new Squad gains any Status Tokens any contributing Squads had. Duplicate Tokens are discarded.

Faction-Specific

Do Units with Bikes count as Vehicles or Infantry for Scenario Objectives? And for Bioficer Decon weapons, do they count as Infantry or as Vehicles for RM generation?

Bikes outside Zones count as Vehicles for Scenario Objectives. However, they are treated as Infantry for Decon weapons.

Aux Gates cannot be targeted by Command Cards that target Gates. Can they be targeted by cards that target non-Gates?

Yes.
