

OPERATION ARTEMIS RULES UPDATE

VERSION 1.2.0

NARRATIVE VS BALANCED PLAY

Missions on the Tlalocan Moons can be chaotic and unpredictable, forcing pilots into daring acts for survival. However, if you and your opponent are looking for a more controlled skirmish, we recommend removing the following cards from the Command Card Decks:

PHR: Deafening Silence

Fauna: Sound of the Planet

CLASS, DANGER AND RESPONSE

Each PHR Walker and Fauna have a Class Level, which represents their lethality during missions. After selecting a Scenario to play, take a look at the Danger and Response values for that scenario. When choosing which models to use, the Fauna player may select Fauna whose total Class Levels are equal to or less than the Danger. Similarly, the PHR player may select Walkers whose total Class Levels are equal to or less than the Response.

However, the Danger and Response should be seen as guidelines for the scenario in question and players should feel free to adjust these as they see fit. The closer the two values, the more balanced the scenario should be, while a higher Danger level will make for a more difficult mission for the PHR. Make sure to keep a leaderboard of who can defeat each scenario with the biggest Danger to Response difference!

PHR	CLASS
Agas	8
Dahaka	8
Mithra	8
Rashnu	8

FAUNA	CLASS
Harpy	1
Sphinx	3
Keres	4
Minotaur	5
Gorgon	8
Typhon	10

FORMING GROUPS

When selecting models for a scenario, each type of model must be combined into a group to activate together. A group must contain a number of models to meet the minimum size, and you must fill the group to the maximum size before selecting a second group of the same type. The minimum and maximum size of the group depends on the class of the model.

CLASS	GROUP SIZE
1	5-10
2	3-8
3	2-4
4	1-3
5+	1

MISSION INTEL

When selecting models for a scenario, each player must first select these groups as mandatory choices. They may then select additional models up to the agreed Danger and Response. If a scenario lists the Mission Intel as “None”, that player may select whichever groups they wish.

ADDITIONAL RULES

MOVING

Add the following:

Dash: When a PHR model would make a Move Action during its activation, it may instead dash. If it does, until the end of its activation increase its Move by 3”, and increase the Noise by 3. A model may not make attacks with any of its non-Base Contact weapons in the activation it makes a dash.

SPECIAL RULES

Add the following Special Rules:

Aura - When using an attack with the Aura Special Rule, all models (friendly or enemy, other than the model making the attack) within the attack range and line of sight are hit. Roll the weapon's Damage separately for each target.

ERRATA

MAIN RULEBOOK

Pg8. - Command Cards

Change the first line to:

'Each player has a deck of Command Cards which consists of 27 cards.'

Add:

'Command Cards with a Trigger of "At the start of a round." are played after initiative has been determined, but before the first model is activated.'

Pg9. - Activations

Ignore:

'Models in Operation Artemis are divided up into the following groups.' and the following table.

Add:

'At the start of each Round, if one player has less groups in play than the other, the player with less groups gains a number of pass markers equal to the difference. During the Round, instead of activating a group, a player with a pass marker may spend one marker to skip that activation.'

Pg13. - Force-back

Change the first line to:

'Any model that loses Health from this weapon may be moved up to 3" away from the attacking model in a direction of the attacking model's choosing.'

Pg15,16,17,18,19. Scenarios

Add:

Danger: 32

Response: 32

Mission Intel:

PHR: None

Fauna: None

Pg18. Beacon Extraction Scenario

Special Rules:

Change the first line to:

'If a PHR walker starts a Movement Action within 3" of a beacon, you may place that beacon on the corresponding walker's character card.'

Pg19. Last Stand Scenario

Special Rules :

Change to:

'This Scenario has no round limit. The game ends once all PHR groups have been destroyed.'

Fauna do not deploy at the start of the game. Instead, at the start of each Round, the Fauna player selects one Group of Fauna and deploys it with 3" of any board edge.'

Victory Conditions:

Change to:

'The PHR player is playing to get the highest score instead of an outright victory. Each Fauna killed scores the PHR player a number of points equal to its Class.'

GROUP CARDS

PHR

Agas - Weapons

RX-1 Railgun - Special

Add:

Ignore Cover

RX-666 Hellblaze Flamethrower - Special

Add:

Ignore Cover

ERRATA

COMMAND CARDS

PHR

Scanning Array

Trigger

Change to:

'Before a PHR group makes an attack with a weapon.'

Effect

Change to:

'Improve that group's dice rolls by 1 with that weapon.'

Lethal Accuracy

Effect

Change to:

'Any abilities on that Fauna model that trigger on that model being destroyed do not activate.'

FAUNA

Corrosive Acid

Effect

Change to:

'Add 3 to the Damage of that weapon.'

Rapid Healing

Effect

Add:

'This cannot allow them to exceed their starting Health.'

High Winds

Effect

Change to:

'Until the end of the round. Reduce the dice rolls of all non-Base Contact weapons by 1.'

Ambush

Add Note:

'If you do not control a Harpy Group, you may discard this card and draw another.'

Ambushing Swarm

Add Note:

'If you do not control a Harpy Group, you may discard this card and draw another.'

Apex

Add Note:

'If you do not control more than one Minotaur Group, you may discard this card and draw another.'

Endless Stampede:

Effect

Change Second Sentence to:

'You may deploy an additional previously destroyed Sphinx for each Threat Level.'

Add Note:

'If you did not control a Sphinx Group, you may discard this card and draw another.'

GENERAL

Why are my bases blue?

Bases have a protective film on them; you'll need to peel it off for the bases to be clear.

What glue do I use?

As Operation Artemis uses both plastic and resin miniatures and parts, we recommend using Super Glue to put together these miniatures and for attaching them to their bases.

Are the models in this game compatible with Dropzone Commander?

Yes, all models in this game have rules for use with Dropzone Commander.

What Scale are these models?

10mm. The same as Dropzone Commander.

MOVING

Do models have to stay together when they move, or can I spread them out?

Models move individually and don't have to stay within any range of any other model in their group.

ATTACKING

Can you attack with ranged weapons while in base contact with an enemy model?

Yes.

Does the facing of my models matter?

No, models can attack and move in any direction.

Can I use different weapons on a model to attack different targets?

Yes.

Do you have to declare targets for all your attacks before rolling any dice?

Yes, declare the targets of all weapons before rolling any dice.

SPECIAL RULES

When you hit with an attack with the Explosive special rule, where do you measure from?

The edge of the model's base.

How does the Electrified rule work?

Double the amount of damage dice of the weapon when you use it against a model with 6 or more starting health (like a Sphinx or Minotaur).

How does Sweep or Strike work when targeting multiple models?

Each target gets attacked separately, using the weapon's full Damage value each time.

MODEL SPECIFIC

AGAS

When using the Agas' Defensive Flame, can I still use the Flamethrower/Railgun normally during its activation? What about using the Defensive Flame after already having used the Flamethrower/Railgun?

You can attack normally with the Flamethrower/Railgun as well as use the Flamethrower (but not the Railgun) via the Defensive Flame rule in the same round. This means you could potentially attack twice with the Flamethrower, or once with the Railgun and once with the Flamethrower in the same round.

RASHNU

Does the Shield rule also affect the Rashnu itself?

Yes.

HARPIES

How does the Swarm rule interact with Threat?

Apply the Swarm rule before Threat. The maximum of 2 damage dice only applies to damage dice gained from the Swarm rule.

How does the Rail special rule interact with multiple Harpies being under the line?

All Harpies under the line are hit. The attacker rolls their Damage dice once, then the defender rolls Armour for each affected Harpy.

How does the Explosive rule interact with Harpies, if a model is hit with an explosive weapon and there is a Harpy within 3" of it, is the Harpy hit?

Yes. If the Harpy is within the range of the explosion, it is hit by the explosion. Measure to the edge of the base, not the flight stem or the model.

BASE SIZES

PHR	BASE SIZE
Agas	40mmx40mm
Dahaka	40mmx40mm
Mithra	40mmx40mm
Rashnu	40mmx40mm

FAUNA	BASE SIZE
Harpy	20mmx20mm
Sphinx	30mmx30mm
Keres	60mmx60mm
Minotaur	60mmx60mm
Gorgon	60mmx60mm
Typhon	60mmx60mm

GORGON

Lurking in the crushing depths of the Tlalocan Moons, the Gorgon lies in perpetual, patient wait. This serpentine, multi-limbed monstrosity, fully capable of biting the torso of a Type 9 Walker clean in half, appears to be sightless, though it is far from unaware. It navigates by sensing even the faintest tremors, drawing the beast to the epicentre of combat, where it explodes from the earth in extreme violence to stun its prey with powerful electromagnetic pulses, tear through the hulls of PHR armour with its huge jaws and drag what remains into the suffocating darkness of its tunnels.

GORGON

MOVE

6"

ARMOUR

3

HEALTH

14

Death Spasms: When this model is destroyed, increase the Noise by 3. All models within 3" are hit with a 3 attack.

Underground Assault: When this model makes a Move Action, it may instead be placed within 10" of its starting position. If the current Threat Level is 0, this model must be placed more than 3" away from any other model or beacon. You may decrease this distance by the current threat level.

Burst Forth: During the activation this model is moved using its Underground Assault, attacks made with its Huge Jaw score 2 successes on 5+.

TYPHON

The Typhon is less a creature and more a living fortress; the very ground trembling beneath its colossal tread. Clad in impenetrable, heavy-plated scales, it shrugs off all but the most concerted assaults. While the Typhon is typically observed acting as a defensive entity near Bioficer beacons, this passivity is an illusion maintained solely by the signals emitted from those structures. Without the influence of the beacons, the creature's true, devastating aggression is unleashed.

TYPHON

MOVE

4"

ARMOUR

7

HEALTH

18

Thundering Fall: When this model is destroyed, add 10 to the Noise.

Earth-shattering Charge: When this model makes a Move Action, it may instead charge. If it does, it moves 6" in a straight line. If this move would take it into base contact with impassable terrain, difficult terrain or any model of Class 3 or less, destroy them and continue the move. If this move takes it into base contact with any other model or beacon, end the move and that model or beacon is hit with a 5 attack.

Pacified Giant: While this model is within 3" of a beacon (or a model holding a beacon), this model counts the current threat level as one lower. Otherwise, this model counts the current threat level as one higher.

Rampage: Decrease this model's armour by the current threat level.

KERES

The Keres is a nightmarish, tentacled behemoth that stalks the ruins of the Tlalocan Moons, scavenging the wounded and the recently fallen. Its elongated, clawed limbs allow it to maintain a low, hunched profile while navigating the cityscape, yet they are equally lethal in combat, capable of piercing PHR walker plating to reach the soft targets within. Once prey is snared in its toxic, constricting tentacles, any hope of rescue is effectively extinguished.

FAUNA

KERES

MOVE	ARMOUR	HEALTH
8"	2 	10

Blood Sense: At the start of the Round, select one model within 10" of this model that has lost 1 or more Health. Once during this Round, if that model loses any more Health, this model may immediately make a Move Action of up to 4". It must end this move closer to the selected model.

Frenzied Pounce: When this model makes a Move Action, if it is within 10" of the model selected using its Blood Sense, it may increase its Move by 2". If it does so, it must move into Base Contact with that model and make an Attack Action with all of its weapons.

Ravenous Hunger: When making an attack against a model that has lost 1 or more Health, improve the dice rolls of this model's attacks by 1.

SCENARIO - ESCAPE

Two Bioficer beacons pulse silently in the eerie, vacant core of an abandoned city district. Sent in on what should be a routine recovery sweep, a PHR walker element moves to secure the telemetry and extract. But the unsettling stillness is an illusion - deep beneath the shattered city, a burrowing Gorgon tracks the heavy vibrations above, ready to turn the quiet streets into a subterranean killing ground.

Danger: 32

Response: 32

Mission Intel:

PHR: None

Fauna: 1 Group of Gorgon, 1 Group of Sphinx

DEPLOYMENT:

The PHR deploy within the blue deployment zone. The Fauna deploy within the red deployment zone.

Each player alternates deploying a group wholly with their deployment zone, starting with the PHR player.

SCENARIO – ESCAPE

SPECIAL RULES:

Beacon Recovery: If a PHR walker starts a Movement Action within 3" of a beacon, you may place that beacon on the corresponding walker's character card. If the model with the beacon is destroyed, place the beacon within 3" of where the model was destroyed.

Escape: If a PHR model ends its move in Base Contact with the board edge opposite its deployment zone, you may remove that model from the game.

VICTORY CONDITIONS:

The PHR player scores 3 Victory Points for each model and 2 Victory Points for each beacon removed from the board via the Escape special rule.

The Fauna player scores 3 Victory Points for each PHR model destroyed, or 4 Victory Points if that model was destroyed by a Gorgon.

SCENARIO – SLAYER OF KINGS

Five Bioficer beacons hum with unnatural energy across the ruins of an abandoned city. Marked as high-priority targets by command, but deprived of orbital fire support, a squad of PHR Frontier Walkers drops directly into the overgrown sector to secure the site for research teams. However, the beacons are far from abandoned—a massive, heavily armored Typhon claims this ground as its domain, and it will tear through anything that threatens its territory.

Danger: 32

Response: 32

Mission Intel:

PHR: None

Fauna: 1 Group of Typhon (No additional Groups of Typhon may be taken.)

DEPLOYMENT:

The PHR deploy within the blue deployment zone. The Typhon deploys within 3" of the center of the battlefield. All other Fauna deploy within the red deployment zone.

The Typhon is deployed first. Then, each player alternates deploying a group wholly with their deployment zone, starting with the PHR player.

SCENARIO – SLAYER OF KINGS

SPECIAL RULES:

Weapons Free: In this mission, the PHR may target beacons with attacks.

Protective Forcefield: When making attacks with non-Base Contact weapons against beacons, reduce the dice roll by 1.

Roused to Ruin: After a PHR model makes an Attack Action against a Beacon, if the Typhon is within 6" of that Beacon, it must immediately use its Earth-shattering Charge. The direction moved must be directly towards the model that made the Attack Action.

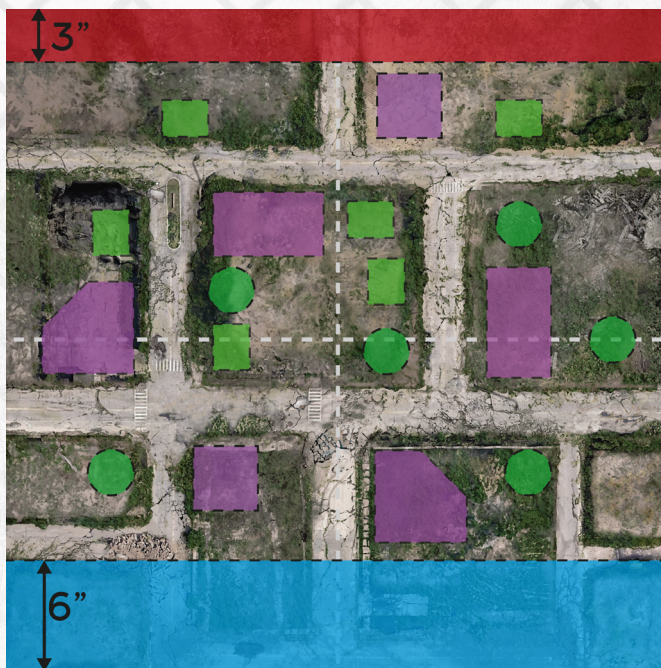

VICTORY CONDITIONS:

The PHR player scores 3 Victory Points for each beacon destroyed and 5 Victory Points if the Typhon has been destroyed.

The Fauna player scores 3 Victory Points for each remaining beacon and 3 Victory Points for each PHR model destroyed.

SCENARIO – RESCUE MISSION

Following a devastating engagement with local megafauna, a PHR Walker has suffered catastrophic control lock. As the predatory Keres stalk the perimeter, the remaining strike team locks down the sector to buy time. They must hold off the encroaching beasts long enough to run a hard-line system reboot—or extract the pilot's armoured pod before the rescue team gets overwhelmed.

Danger: 32

Response: 32

Mission Intel:

PHR: None

Fauna: 1 Group of Keres

DEPLOYMENT:

The PHR player assigns numbers 2 through 5 to four of their models and then rolls 1d6. If the roll matches a designated number, that model becomes the disabled Walker. On a 6, the PHR player may select which model becomes the disabled walker and on a 1, the Fauna player selects instead. This model deploys in the centre of the board. All other PHR deploy within the blue deployment zone. All Fauna deploy within the red deployment zone.

The disabled walker is deployed first, then each player alternates deploying a group wholly with their deployment zone, starting with the Fauna player.

SCENARIO – RESCUE MISSION

SPECIAL RULES:

Disabled Walker: The disabled walker starts the game with three System Damage markers. While the model has one or more System Damage markers, it may not make any kind of move or be the target of any Command Cards.

System Reboot: Instead of making both a Movement and Attack Action, one other friendly model in base-contact with the disabled walker may establish a hard-line data tether. If they do so, remove 1 System Damage marker from the disabled walker.

Extract the Pilot: At the start of the disabled walker's Activation, if it has one or more System Damage markers, the PHR player can choose to abandon the walker. If they do so, place a Rescue Pod marker within 3" of the walker's position or on the character card of another friendly model within 3". The walker is then destroyed. If a PHR model ends a Move Action within 3" of the marker, they may place it on its character card. If the model with the Rescue Pod marker is destroyed, place the marker within 3" of where the model was destroyed. If the disabled walker is destroyed without the Rescue Pod marker being placed, the Escape Pod also counts as destroyed.

Rescue Pod: If on the board, the Rescue Pod marker may be targeted by attacks by the fauna player. It has the following Profile:

MOVE	ARMOUR	HEALTH
0"	1 	3

Weapons Systems...Online: The disabled walker may not make Attack Actions unless it has two or fewer System Damage markers.

Wounded Target: While the disabled walker still has System Damage markers, it counts as having lost 1 or more Health for the purpose of any Keres' abilities.

Escape: If a PHR model ends its move in Base Contact with the long board edge in its deployment zone, you may remove that model from the game.

Victory Conditions:

The PHR player scores 10 Victory Points if the disabled walker ends the game with no System Damage Markers or is successfully removed from the board via the Escape special rule, or 6 Victory Points if the Rescue Pod marker is on a friendly model or has been removed from the board via the Escape special rule.

The Fauna player scores 4 Victory Points if the disabled walker is destroyed, 6 Victory Points if the Rescue Pod is destroyed, and 5 Victory Points for each other PHR model destroyed during the game.
