

Behemoth Rules

Behemoths are among the largest ground-based war machines of the 27th century. They dwarf regular Units and can annihilate whole armies, so have their own special rules. These are not recommended for new players since they are quite complex. Indeed, some Behemoths are so huge that they can only be taken in 3000+ point games. Behemoths are the most awesome Units a player can field.

1. Behemoth Core Rules

1.1 Taking Behemoths

Behemoths have a Groups Equivalent stat instead of Squad Size. A Behemoth counts as that many Groups when building your Army and generating Pass tokens but counts as 1 Group for the 'no Group may cost more than 1/4 of your total allowed pts' rule.

Commanders cannot be assigned to Behemoths.

Behemoths have the special Type 'Behemoth'. They are treated as Vehicles with Large unless another rule contradicts this.

1.1.1 Casual Games and Behemoth Scenarios

In casual games, players may agree to waive any of the Army building restrictions.

Also, several special Behemoth Scenarios allow players to take Behemoths in your Army in other ways

1.2 Exceptions

Behemoths are so huge that several things cannot affect them:

1. Command Cards cannot target Behemoths. Cards which target 'all' of anything which include a Behemoth (e.g. all friendly Units) do not affect the Behemoth directly.
2. Command Abilities cannot target Behemoths.
3. Behemoths cannot receive Status tokens.
4. Behemoths cannot be Obscured, even by special rules.
5. Behemoths cannot carry Objects.
6. Friendly Shield and Repair special rules cannot affect Behemoths.
7. Passive Countermeasures on Behemoths are unmodified by E9 and E10 sources.

1.3 Power & Activating Behemoths

Behemoths activate differently from normal Groups, and often multiple times per Round. What is possible is governed by their Power stat.

Behemoths begin each Round with a number of Power tokens (PT) equal to their Power. When you may activate a normal Group, you may instead activate a Behemoth with PT remaining. It must then complete one Action from the Power Table:

PT Cost		Action
Reposition	1	Move up to half Mv
Advance	3	Move up to full Mv
Fire	1	Attack with 1 Weapon
Volley	3	Attack with 2 Weapons
Charge	2	Add 1 to this Behemoth's Power next Round
Discharge	1	None
Use Gear	Varies	Use one Gear. See 'Gear'

You may move each Behemoth up to twice per Round, up to its full Mv each time. Normal Mv limits for Embarking/Disembarking are ignored for Behemoths, but they may only Embark/Disembark Units on Reposition.

You may use each Gear once per Round.

Each Weapon may attack once per Round. Normal MA limits apply—the total distance from both allowed moves is used.

1.4 Behemoth Entry

Unless a Scenario specifies an entry requirement for Behemoths, players have two options. Players must simultaneously reveal which they will be using for each Behemoth before the game begins.

1.4.1.1 Move On Entry

This Behemoth begins Reserved and must enter using an Advance Action.

1.4.1.2 Drop Harness Entry

This Behemoth begins in Holding and may only enter via Drop Harness from Round 2.

At the end of its activation, a friendly Unit that has not Embarked/Disembarked this Round and has Scout, Command Centre, or contains a Commander may designate a point within 12" of itself in Line of Sight. That point must be on open Ground and at least 3" from any Unit or Zone.

Next, move that point D6-2" in a random direction. Place that Behemoth with its centre on that point (see 'Moving and Placing Behemoths'). This counts as a move for the Behemoth and it has 2PT remaining that Round.

1.4.2 Vs Ground

Behemoths ignore Exceptional and Poor Ground. Impassable Ground only applies for the Behemoth's centre.

Follow the usual rules for moving over protruding details. Most won't hamper a Behemoth and should be ignored when placing one unless reasonable judgement says otherwise. Players may need to temporarily remove protruding details when placing Behemoths.

1.4.3 Vs Areas

Behemoths may move through and end their move overlapping Areas. Behemoths must use 2" of their available Mv for every 1" of Area their centre crosses.

If any part of a Behemoth, but not its centre, moved through or overlaps an Area, that Area takes D3 damage and the Behemoth takes D3-2 E9 hits—use the same dice result for both.

If a Behemoth's centre moved through or overlaps an Area, that Area takes D6 damage and the Behemoth takes D6-4 E9 hits—use the same dice result for both.

If necessary, substitute a 3D Area for a 2D one when placing Behemoths.

1.4.4 Vs Buildings

Behemoths may move through Buildings but may not end their move overlapping them. If a rule would force one to overlap with a Building, the Behemoth's player must shift it so that they are in contact but not overlapping if there's no alternative.

Behemoths must use 3" of their available Mv for every 1" of Building their centre crosses. For Behemoths with a starting DP of 10 or fewer, their centres may not move through a Building.

If any part of a Behemoth, but not its centre, moved through a Building, that Building takes D6 damage and the Behemoth takes D6-3 E9 hits—use the same dice result for both.

If a Behemoth's centre moved through a Building, or if any part of it was forced to overlap with one, roll 1D6 for each of that Building's starting DP. Each 4+ inflicts 1 damage on that Building. Each 6 also inflicts an E9 hit on that Behemoth.

1.4.5 Vs Units

Behemoths may move through non-Behemoth Units. Each enemy Vehicle or Infantry Unit moved through takes D3-1 damage. Each time a 3 is rolled for a Vehicle with 3 or more starting DP, that Behemoth takes an E9 hit.

Behemoths may end their move overlapping non-Behemoth Units. Aircraft must then be shifted the minimum possible distance by their player, maintaining coherency. Vehicles and Infantry are destroyed. For each Vehicle destroyed, roll 1D6 for each of its starting DP. Each 4+ inflicts an E9 hit on that Behemoth.

1.5 Attacking Behemoths

Areas are ignored when drawing Line of Sight to/from Behemoths.

Otherwise, attacking Behemoths involves these additional rules:

1.5.1 Concentrate Fire

Weapon attacks of E5 or higher gain Focus 2 against Behemoths.

1.5.2 Flanking Fire

Behemoths suffer -1A if attacked by Weapons within the Behemoth's rear arc. Use the same arcs the Behemoth would use to attack to determine if it is being targeted in the rear.

Behemoths suffer -1A if attacked by non-CC Weapons within 6".

Both may apply for -2A.

1.5.3 Huge Targets

Weapons always hit Behemoths on a 2+. This cannot be modified, even by special rules, except by aiming for Systems Damage and Decoys. Weapons with an Ac value of A hit Behemoths automatically.

1.5.4 Weapon Special Rule Modifiers

These Weapon Special rules suffer modifiers against Behemoths:

1. Destroyer Weapons on non-Behemoths suffer -1 Destroyer.
2. Pen Weapons of E3 or lower suffer -1Pen after all other modifiers are applied. If applied to Pen 6+, Pen is ignored.
3. Grav Weapons gain only +5E and +1 Devastator against Behemoths.

1.5.5 Damage Thresholds

Behemoths have multiple DP values (e.g. 7,14, 20). The final value its actual DP. If it has not been damaged up to the first value, it is Intact.

For Behemoths with 2 values, if it has been damaged up to the first value or higher, it is Crippled.

For Behemoths with 3 values, if it has been damaged up to the first value or higher, it is Degraded. If it has been damaged up to the second value or higher, it is Crippled.

Degraded Behemoths cannot use Advance.

Crippled Behemoths cannot use Advance or Charge. They are worth half their pts for scenario and scoring purposes, including KP.

1.5.6 Systems Damage

If an enemy Behemoth begins a friendly activation Intact, you may roll one D3 against the Systems Damage Table at the end of that activation for every 3 damage it takes directly from non-CC Weapon attacks during that activation. Roll for each 3 damage and apply the effect before rolling again (e.g. if 6 damage was dealt).

If it was Degraded at the beginning of that activation, roll 2D3 instead. If it was Crippled at the beginning of that activation, roll 3D3 instead.

	Result	Effect
ACM Offline	0-1	Weapons may use their 1st R value against this this Round.
Power Fluctuations	2	-1 PT. Cannot use Advance or Charge next Round.
Drive Destabilised	3	Cannot move again this Round. Can only move once next Round.
Gear Destroyed	4	Cannot use one random Gear (permanent).
Drive Damaged	5	Reposition and Advance cost +IPT (permanent).
Cell Destroyed	6	-1 PT. Suffers -1 Power (permanent).
Optics Damaged	7	All Weapons suffer -1Ac. Cannot aim for Systems Damage (permanent).
Internal Explosion	8	Takes D3 damage.
Weapon Destroyed	9	One random non-Secondary Weapon* cannot attack (permanent).
Armour Cracked	10	Suffers -1A (permanent).
Core Rupture	11	Remove all PT. Suffers -2PT and -1A (permanent).
Heart Shot	12	Behemoth destroyed.

For results 6 and 9, if an already destroyed System/Weapon is chosen, apply results 5 and 8 instead, respectively. Otherwise, duplicate results are cumulative.

* For this roll, Weapons with the same Alt value count as a single Weapon.

1.5.6.1 Aiming for Systems Damage

Immediately before declaring targets when attacking, you may declare you are aiming for Systems Damage against one or more enemy Behemoths. For that activation, your non-CC Weapons suffer -1 to the roll required to hit that Behemoth.

For that activation, you may modify any Systems Damage result against it by up to three, and you choose which System/Weapon is destroyed for results 6 and 9.

1.5.7 Mortal Damage

When a Behemoth is destroyed, it is not immediately removed. Instead, its player must roll 1D6 against the Mortal Damage table at the end of the current activation and apply the result before removing it. Add 1 to the result if that Behemoth had a starting DP of 15 or higher:

	Result	Effect
Slumped	1-2	Leave the miniature in place. It is still destroyed.
Blaze of Glory	3	That Behemoth may make a Fire or Volley Action if it has sufficient PT. Then, apply result 4.
Cell Burst	4	Units and Zones within 6" suffer an E6 hit. Place a Jammed Status Token on every Squad this damages.
Structural Collapse	5	Non-Behemoth Vehicles and Infantry within D3+4" are destroyed on a 5+ (roll for each). Behemoths and Zones within 6" take D6 E10 hits.
Magazine Detonation	6	Within 2D6", Units suffer an E10 hit, Infantry and Units with 1 starting DP are destroyed, and Zones suffer D6 damage. Place a Concussed Status Token on every Squad this damages.
Core Implosion	7	Units and Zones within D3+5" are destroyed.

1.6 Transport Behemoths

Some Behemoths are Transports. Except for Behemoths with the Director Gear, Behemoths taken with Squads aboard do not share a Group with their transported Squads. Instead, all Squads aboard a Behemoth at the start of the game form a single Group. They may Disembark during their own Activation or while their Behemoth makes a Reposition Action.

A Behemoth's Mv is not reduced if it Disembarks Units, but no Units may Disembark from a Behemoth during a Round in which it makes an Advance action. Units cannot Embark into Transport Behemoths other than Gate Behemoths.

Any Units Embarked in a Behemoth when it is destroyed are destroyed.

1.7 Gear

Behemoths often incorporate non-Weapon equipment that expends PT to use (cost shown before each System's name on the Behemoth's stat sheet). These are:

1.7.1 Director X: Y

This Behemoth has a Transport capacity specifically for Squads with Directed. X states the number of those Squads and Y states the number of Units within them. The Behemoth is their Director, and they are Directed by it. A Behemoth with Director begins the game with its Transport capacity filled.

When this Behemoth uses this Gear, it may Disembark one Squad of Directed Units. Directed Units are a part of this Behemoth's Group but can only activate when it uses this Gear, at the end of that Action.

Directed Units are destroyed when their Behemoth is destroyed. Otherwise, they act as normal Units.

1.7.2 Jump System X”

When it next moves, this Behemoth's Mv becomes X” and it ignores all scenery and Units while moving. Placing it, though, follows the normal rules. Its next move Action costs OPT (either Reposition or Advance).

1.7.3 Decoys

Enemy Weapons suffer -1 to the roll required to hit this Behemoth this Round. This System may only be used once per game and is ignored for Gear Destroyed results once used.

1.7.4 Shield Booster

This Gear cannot be used in a Use Gear Action. Instead, immediately before rolling Passive Countermeasure saves due to enemy attacks, you may spend any amount of PT. If you do, you may have two of the saves per PT spent negate the incoming damage on a 2+, after all other modifiers are applied. You may do this any number of times per Round. If you roll a 1 for any of these upgraded saves, this Gear is destroyed at the end of that enemy activation.

If this Gear is destroyed, this Behemoth loses its Passive Countermeasures.

1.7.5 Redundancy

Remove one permanent Effect from Systems Damage on this Behemoth. Weapon Destroyed requires double this System's PT cost to remove. This cannot be used to remove Weapon Destroyed from Integral Weapons. This System may only be used once per game and is ignored for Gear Destroyed results once used.

1.7.6 Healing System X

This Behemoth recovers X lost DP.

1.7.7 Scrambler +X

One Behemoth in Line of Sight suffers an additional -1 Ac penalty when Aiming for Systems Damage this Round. In addition, that Behemoth must spend +X PT to Use Gear this Round.

1.7.8 Shroud X+

On an X+, you opponent cannot aim for Systems Damage against this Behemoth until the start of its first Action next Round.

1.7.9 Target Lock

Pick an enemy Squad in Clear Line of Sight of this Behemoth. Weapons fired by this Behemoth in later Actions this Round gain +3Ac against that Squad and may ignore the accuracy reduction incurred by aiming for Systems Damage.

1.7.10 Weapons Capacitors

Weapons with Capacitors on this Behemoth gain the stated effect when attacking this Round.

2. Behemoth Special Rules

2.1.1 Directed

This Unit may not be taken in your Army—it is included with its Behemoth.

This Unit cannot activate or Embark/Disembark except when its Behemoth's Director Gear is used. It does not count towards your Groups when generating pass tokens. It cannot carry Objects. If this Unit's Behemoth is destroyed, this Unit is destroyed.

2.1.2 Integrated Gate

This Behemoth functions as an Auxiliary Gate, except that Squads can only Embark/Disembark from it outside of its activation. In addition, this Behemoth may attack in the same Round as Embarking/Disembarking Units.

A Gate Behemoth's movement is not reduced if Units Embark into or Disembark from it, but no Units may Embark or Disembark from this Behemoth during a Round in which it makes an Advance action.

2.1.3 Lithe

This Behemoth's centre counts as any other part of it when moving over or being placed on Zones.

2.1.4 Walker X" x Y"

Many Behemoths stride into battle and can move dynamically. On something this huge, its pose could excessively advantage/disadvantage it.

Treat Walkers as if they were a solid cylinder with an X" radius and Y" high.

When measuring to/from a Walker, use any point within this cylinder to determine range and Line of Sight (use the same point for both). Arcs should be drawn to/from the centre of the model as usual.

Walkers must still conform to the normal placement rules too—parts of the model that protrude from this cylinder still count, but ONLY when placing. Be mindful of this when building them. An ultra-wide pose might make one needlessly awkward to place.

3. Behemoth Weapon Special Rules

3.1.1 Capacitors: X

This Weapon can gain one or more modifiers from a Weapons Capacitors System.

3.1.2 Disrupt

If this Weapon damages a Behemoth, you may make one D3 roll against that Behemoth on the Systems Damage table at the end of that activation. The result cannot be modified. Damage dealt by this Weapon still contributes to normal Systems Damage amounts, and this roll is in addition to any others.

3.1.3 AS X (Anti-Systems)

If this Weapon damages a Behemoth, you may modify any Systems Damage roll against that Behemoth that activation by up to X.

3.1.4 Huge Blast

This is a Blast Weapon but instead uses an 8" diameter template.

3.1.5 Integral

This Weapon can receive 2 Weapon Destroyed results from Systems Damage, and it requires 2 results before it cannot attack. It suffers -1E after one Weapon Destroyed result.

This Weapon counts as 2 Weapons on the Actions table so can only attack using Volley.

3.1.6 LT X" (Limited Traverse)

This Weapon cannot attack non-Behemoth Units within X".

3.1.7 Linked X

Weapons with the same Linked number count as one Weapon for Actions and spending PT.

3.1.8 Macro

Macro Weapons have Strafe and may always use their 1st R value against non-Behemoths. They ignore Passive Countermeasures on non-Behemoths. Macro Weapons suffer -1Ac against Units with 2 or fewer starting DP.

Against non-Behemoth Units, each hit inflicts 2DP without rolling to inflict damage. Since you do not roll to inflict damage, Criticals are not inflicted. However, if this Weapon has Devastator, it's additional damage is still added—the automatic 2DP counts as one success.

Infantry Units hit by Macro Weapons are destroyed. If hits would be assigned to the Squad instead of individual Units, one Unit in the Squad is destroyed per hit, starting with the most damaged.

Damage dealt by Macro Weapons with CC does contribute to Systems Damage, but they do suffer the accuracy penalty when aiming for Systems Damage.

If a Macro Weapon damaged a Behemoth on the same activation as it was destroyed, add 1 to the Mortal Damage result.

3.1.9 Secondary

This Weapon may attack at the end of any of its Behemoth's Actions in addition to other Weapons that attacked that Action.

4. Behemoth FAQ's & Rules Clashes

4.1.1 Vs Shaltari 'Confound' Command Card

Behemoths are still affected by this as the target is the opponent. If the roll in 'Effect' is failed when choosing to make an Action with a Behemoth, another Group must be chosen if any remain available.
